

netdem::Modifier

netdem::Membrane

netdem::MembraneWall

```
classDiagram
    netdem::MembraneWall --> netdem::Modifier
    netdem::MembraneWall --> netdem::Membrane
```

The diagram illustrates a class hierarchy where `netdem::MembraneWall` is the base class, and `netdem::Modifier` and `netdem::Membrane` are its subclasses. This is represented by a horizontal line connecting the two subclasses, with a vertical line extending downwards from the center of this line to the base class box below.
